Fasting is strongly recommended but not required.

Please fast 9 - 12 hours before your screening (nothing to eat or drink besides water) for the most accurate results. People who have been diagnosed with diabetes mellitus or hypoglycemia, women who are pregnant and people taking prescription medicines that must be taken with food do not need to fast. You should consult with your doctor to find out if fasting is right for you.

Confidential – no individually identifiable information is shared.

HumanaVitality is not an insurance product. HumanaVitality is only available to KEHP covered members. Your plan is administered by Humana Insurance Company. Program details subject to change.
